Executive Summary

DataFlow Platform is a next-generation data integration solution designed to consolidate customer data from multiple sources into a unified analytics dashboard. The project aims to reduce reporting time from 3 days to under 4 hours.

Project Scope

The platform will integrate data from:

- Legacy CRM system (Oracle)
- E-commerce platform (Shopify)
- Support ticketing system (Zendesk)
- Marketing automation (HubSpot)

Key Deliverables

- Data Integration Layer - ETL pipelines for all source systems
- Analytics Dashboard - Real-time reporting interface
- API Gateway - External access for partner systems
- Admin Console - System configuration and monitoring

Documentation References

Project Team

Role	Name	Department
Project Manager	Sarah Chen	PMO
Lead Architect	Marcus Webb	Engineering

Data Engineer	Lisa Park	Data Team
Security Lead	James Morton	InfoSec

Budget Summary

- Total Approved Budget: CHF 850,000
- Spent to Date: CHF 312,000
- Remaining: CHF 538,000

Risk Register

Risk	Impact	Mitigation
Vendor delivery delays	High	Weekly status calls, penalty c
Data quality issues	Medium	Validation pipeline in Phase 1
Security compliance	High	Early InfoSec engagement (see
