

Beyond Automation: When AI Agents Take the Wheel

Matteo Sorci, PhD
DELL Account Executive

Some of my guitars

About Me

AI Innovator by day, rock star by night

Hi, I'm Matteo, Account Executive at Dell Technologies and lifelong AI geek. I spend my days guiding clients to game-changing tech, and my nights jamming on guitars, snapping photos, and painting. I live where creativity meets innovation.

Join me and let's build something inspiring!

THE DAILY GRIND

STRESS vs STRATEGIC CALM

DELL Technologies

UNDERSTANDING AI AND GENERATIVE AI

TRADITIONAL AI

Recognizes patterns,
makes predictions.

Traditional AI analyzes what exists.

GENERATIVE AI

Creates new
content

Generative AI creates what doesn't.

DELL Technologies

The AI Family Tree: A Simple Analogy

Traditional AI

Think of it as Sherlock Holmes

What it does:

-  Observes patterns
-  Analyzes data
-  Makes predictions

 "Elementary my dear Watson, this pattern indicates fraud!"

Generative AI

More like Picasso

What it does:

-  Creates text
-  Generates images
-  Produces code

 "Every prompt is a blank canvas, and I paint with words and pixels!"

Agentic AI

Your Personal Assistant

What it does:

-  Manages your schedule
-  Books your flights
-  Negotiates with suppliers
-  Coordinates multiple tasks

From Generative to Agentic

2020–2022: Generative AI
Creates on demand

2023–2025: Agentic AI
Plans and executes autonomously

From **TELL ME WHAT TO MAKE** to **TELL ME WHAT TO ACHIEVE**

BEYOND SIMPLE AUTOMATION

AGENTIC AI

SIMPLE AUTOMATION

SMART WORKFLOWS

AI systems that can
Plan, Reason, and Act
autonomously to achieve **Goals**.

Planning A Database Performance Crisis

When Plans Don't Go According to Plan

TRADITIONAL AUTOMATION

Alert fires

└─ Check runbook

└─ Manually scale

└─ HOPE IT WORKS

When things go wrong

- Primary DB fails
- Read replicas lag
- Users complaining

AGENTIC AI

*Prevents problems
before they become incidents*

- Monitors query patterns
- Predicts bottlenecks
- Auto-scales resources
- Optimizes queries
- Handles failover
- Adapts to challenges in real-time
- Reports to team lead

CORE CAPABILITIES THAT MATTER- KEY COMPONENTS

*"Plan my vacation to Hawaii"
or "Optimize our company's supply
chain"*

Goals

*Breaking "Plan vacation" into : check
flights, find hotels, research activities,
etc.*

Planning

*Remembering your preference for
morning flights or avoiding previously
problematic hotels*

Learning

*Booking flights, reserving hotels,
creating itineraries*

Action

Agent-Environment Interaction Loop

AGENTIC AI IN BUSINESS

OPERATIONS

Supply chain optimization, process automation, resource allocation

CUSTOMER EXPERIENCE

System monitoring, security response, performance optimization

FINANCE & ANALYTICS

Risk assessment, fraud detection, market analysis

IT INFRASTRUCTURE

System monitoring, security response, performance optimization

Multi-agent AI Systems

Specialized Agents Working Together

- **SUPERVISOR AGENT:** Coordinates overall strategy
- **VISION AGENT:** Processes imaging data
- **DATA AGENT:** Manages patient records
- **ANALYSIS AGENT:** Identifies patterns
- **PLANNING AGENT:** Develops treatment plans
- **EXECUTE AGENT:** Implements protocols
- **MONITOR AGENT:** Tracks progress

KEY BENEFITS

SPECIALIZATION: Each agent is an expert

RESILIENCE: System adapts if one fails

SCALABILITY: Add agents as needed

From single AI tools to *coordinated* AI teams

KEY BENEFITS

24/7 OPERATION

Never sleeps, never stops

Faster decisions, fewer errors

INCREASED
EFFICIENCY

COMPLEX
PROBLEM
SOLVING

Handles what humans struggle with

Grows with your needs

SCALABLE
INTELLIGENCE

Transforming How Business Gets Done

Phase 1: 2025–2026

Early Adopters

- Customer service automation
- Basic process optimization
- Pilot programs across departments

Phase 2: 2027–2029

Mainstream Integration

- Self-optimizing operations
- Predictive market responses
- Human-AI strategic partnerships

Phase 3: 2030+

Autonomous Business

- Cross-functional agent teams
- Strategic decision support
- Industry-wide transformation

From reactive business processes to proactive intelligent systems

The hype is about the intelligence. The reality is about the iron.

! THE INFRASTRUCTURE REALITY CHECK

The shift from passive tools to autonomous AI isn't a software update, it's an infrastructure earthquake.

Agentic AI demands

Power
20-30x
more processing
power

Tokens
Exponential
consumption
growth

Speed
Ultra-low
latency
required

DELL'S STRATEGIC RESPONSE

Dell's disaggregated architecture is engineered for agentic AI's dynamic demands

Purpose-Built AI Solutions

62% savings
On-premises can be
more economical than
cloud for inference

Agent-Optimized
Built for robotics, digital
twins, and multi-modal AI
workloads

Future-Ready
Hyperconverged
simplicity with massive
agent scalability

With 75% of organizations stating AI is key to their strategy,
the question isn't if you'll adopt autonomous agents, but **how you'll prepare**

Key Takeaways

WHAT IT IS – Beyond Automation

AI that plans, reasons, and acts autonomously toward goals

WHY IT MATTERS – Competitive Advantage

Handles complexity humans struggle with, operates 24/7

HOW TO START – Start Small, Scale Smart

Pilot projects, prove value, then expand gradually

TIMELINE REALITY – Evolution, Not Revolution

2-3 years for meaningful impact, patience required

"AI agents will transform the way we interact with technology, making it more natural and intuitive. They will enable us to have more meaningful and productive interactions with computers."

Fei-Fei Li, Stanford Professor

n8n: Workflow Automation for AI Agents

n8n is a **workflow automation platform** that uniquely combines AI capabilities with business process automation.

The bridge to Agentic AI implementation:

- Create and orchestrate **multi-agent systems**
- Connect AI agents to **500+ integrations** and APIs
- Build with code or no-code visual interface
- Deploy on-premises or in the cloud

n8n enables the practical implementation of the agentic AI concepts we've discussed:

- **Goals:** Define objectives for each agent
- **Planning:** Coordinate workflows between agents
- **Action:** Execute tasks through integrations
- **Learning:** Store and utilize memory between runs

n8n: Workflow Automation for AI Agents

Our demo showcases a **multi-agent architecture** that brings agentic AI principles to life:

Parent Agent Orchestration

The Ultimate Assistant coordinates specialized child agents

Specialized Child Agents

Email, Calendar, Contact, and Content Creator agents handle specific tasks

Memory & Context Management

Simple Memory system maintains conversation history

Tool Integration

Tavily search and Calculator extend agent capabilities

AI GIVES US THE OPPORTUNITY TO BUILD A
SMARTER, MORE INNOVATIVE, AND SUSTAINABLE
FUTURE, WHERE HUMAN CREATIVITY AND
EXPERTISE LEAD THE WAY.
